**Model families used on this dataset**
transformers currently lead; nobody reports hand-crafted features as competitive

**1D CNN**
LeNet1D, plain convolutional stacks — The starting baseline everywhere

**ResNet1D**
ResNet-18, XResNet1d50/101 — The strong standard deep baseline

**Inception1D**
multi-scale convolution — Captures several beat scales at once

**U-Net variants**
UTransBPNet, rU-Net — Encoder-decoder, often with attention

**Recurrent + attention**
CNN-LSTM-Attention — Older but still competitive

**State space**
S4 — Long-sequence model, benchmarked but not best

**Transformer**
DMT, UTransBPNet — Current best; often conditioned on demographics
